DOM ix 6HT

Simple to use – difficult to outsmart

Advantages

- High security
- High operating convenience through reversible key
- Patent protection

DOM ix 6HT

Simple to use –
difficult to outsmart

The new DOM ix 6HT system is your entry to the world of reversible keys. It is a system with a multi-level security concept which offers high protection thanks to the interaction of many technical details. A special high-deep milling (HT) technique used in the horizontal basic profile enhances security during profile checks and is difficult to copy. This quality product from DOM achieves protection from mechanical manipulation by using high-strength materials.

Thus the DOM ix 6HT system with the sophisticated design provides the required burglary protection level. To protect your valuables at home or at work.

Your entry to the world of reversible key technology

■ HIGH SECURITY

The DOM ix 6HT system uses a patented high-deep milling technique in the key, thus offering high technical key copy protection and high manipulation protection against opening techniques.

■ HIGH CONVENIENCE

The reversible key is made of high grade nickel silver offers a high degree of operating convenience and its key blade length is matched to the most common security fittings.

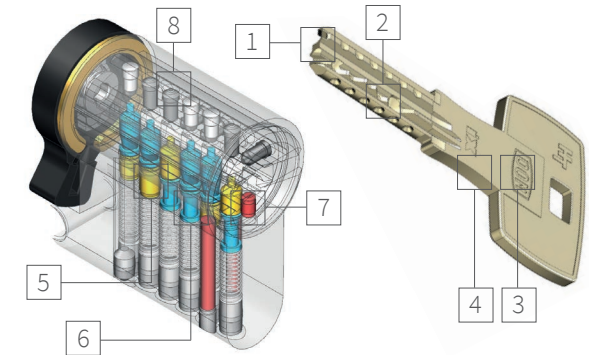

■ NUMEROUS POSSIBLE USES

We offer you numerous different locking cylinder variants. This enables the DOM ix 6HT system to be used e.g. in your front door, cellar door, letter box, garden gate or garage door as a part of a master key system. You can open all doors with just one key. In addition, the DOM ix 6HT system is also suitable for use in locking systems such as e.g. multi family homes, larger residential blocks, small and medium-sized industrial buildings.

■ SECURE INVESTMENT

The optional modular technology offers flexible adaptation of the locking cylinder length at any time on site (e.g. due to moving or the use of new doors). In addition, the hardened snapping web provides enhanced protection from violent “breaking off” and “pulling” of the cylinder.

In detail

1 LIFT-OUT AND SLOPED AREAS

Optimum key insertion

2 COMPLEX CODING IN THE KEY

Makes it more difficult to copy

3 NEW KEY HEAD DESIGN

4 LENGTH OF KEY BLADE MATCHED TO ALL STANDARD SECURITY FITTINGS

5 6 SPRUNG TUMBLERS MADE OF SPECIAL BRASS/HARDENED STEEL

6 ANTI BUMPING & ANTI PICKING PINS

7 DRILL-OPEN PROTECTION VARIANTS

Carbide or hardened steel elements

8 UP TO 12 HORIZONTAL AND VERTICAL REVISION PINS

Checkpoints during the key authorisation query
