Managing your ENiQ® Security Ecosystem

ENIQ APP

ENiQ® App

Use your Android smartphone to programme and manage your entire system.

You no longer need computers, servers and software to get full control and insights of your ENiQ Security Ecosystem: just grab your Android smartphone!

Even though your ENiQ App is designed to be quick and easy to use, that doesn't mean it's not packed with

advanced features. With the ENiQ App, you can access and programme every individual ENiQ device, whether it's connected to your network or directly through local wireless communication via NFC. It always backs up your security plan, and you can seamlessly switch systems if you would like to move to desktop software at some point.

Benefits

- **EASY**
Easy installation: simply download the app and you're ready to go.
- **EVOLVING**
ENiQ evolves with you: start with the app and move on to Access Management software at any time.
- **FLEXIBLE**
Always have quick access to login data and easily track events.
- **QUICK**
Having a full programming tool in your pocket means you can always find quick solutions.
- **SIMPLE**
Save time thanks to the simple process.
- **SECURE**
Always have a backup of your security plan.

Using the ENiQ[®] App

The ENiQ app gives you all the control and insight of our desktop software, without the need for a pc or separate network to connect to all the devices.

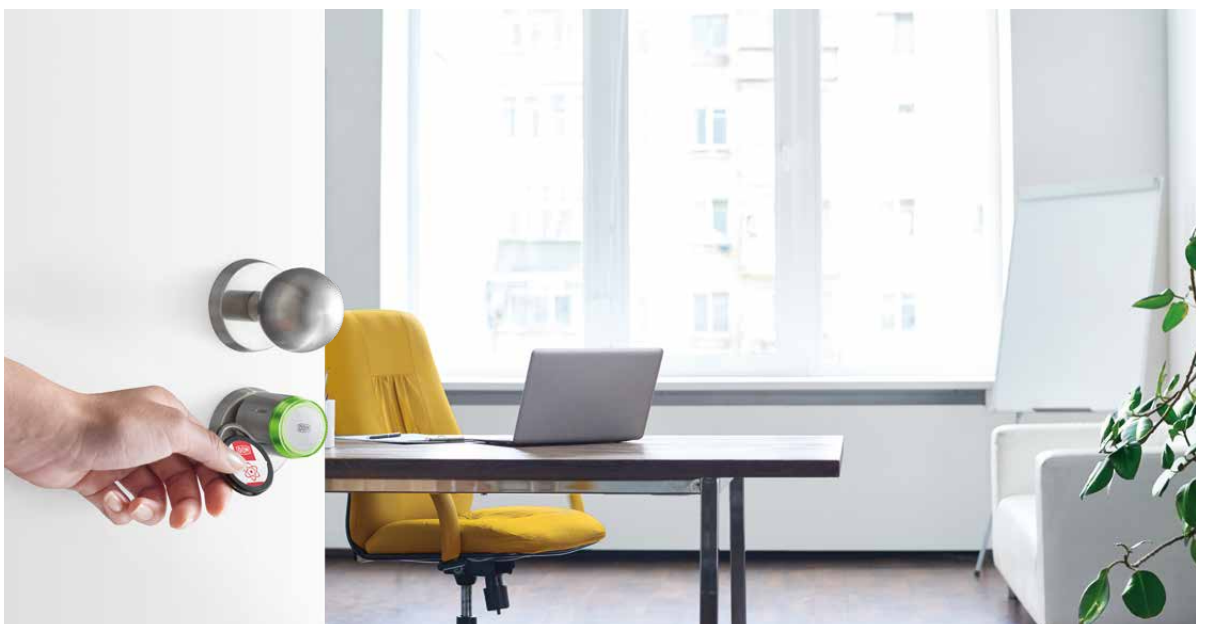

It's a perfect solution for smaller buildings, with not many doors, but with a large number of users that need specific access privileges.

Setting up the ENiQ app is as easy as installing any app on your phone: just

download and go! After that, you are ready to start connecting your ENiQ devices and transponders to the app and to set up your entire ENiQ Security Ecosystem. The ENiQ App can communicate with devices that are connected to a TCP/IP-network,

as well as to offline devices through a direct wireless connection. Now you can create different scenarios and specifically give out authorisations and privileges to users. You can also programme temporary privileges that expire automatically, for instance for

ENIQ APP

temporary workers. Every change you make in access authorisation and privileges in your app is transferred to the specific devices, by tapping the smartphone against it.

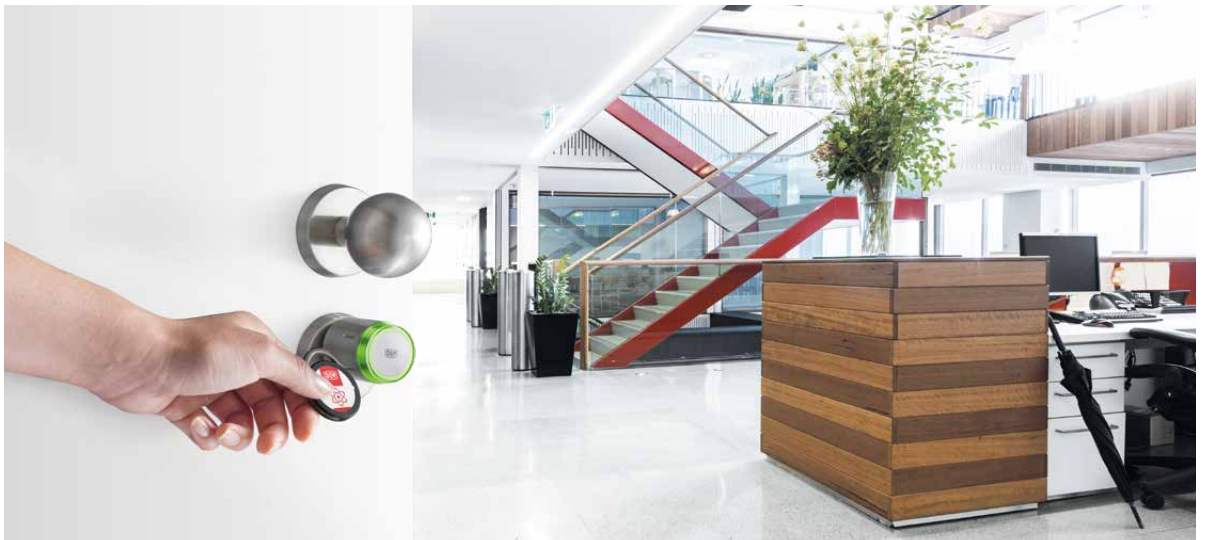

Simultaneously, all events stored in the devices are directly shared with your app. This gives you total control

and insight of your entire ENiQ Security Ecosystem from the palm of your hand.

Adding a new transponder is a matter of simply holding the transponder against your smartphone, activating it and programming its access privileges. After that just hold your phone against the cylinders in question.

Now everything is programmed and ready to go.

If a user loses his/her transponder, you can simply deactivate it in the app and activate a new one. Hold the phone against the cylinders and the lost transponder is now rendered useless, while the new one is introduced at the

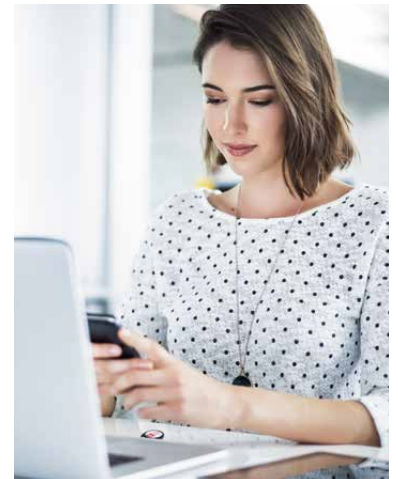

Make every door a digital access point, without any wiring.

All you need is an Android smartphone.

same time. Suppose that the cleaner, who has his own transponder with very specific access hours, is running late. He calls to inform you of this, after which you simply open the ENiQ app, and change the access privileges of the cleaner's transponder for one night. This way he still has access,

even though its later than his usual access hours. Now hold your smartphone against the cylinders, and the access privileges are now changed for tonight. The next day everything automatically changes back to normal.

You're in full control of who has access to where and when.

Using the ENiQ App

- Smaller buildings
- Few access points
- Many users
- App
- No network

Create temporary transponders for visitors.

Just as easy as any other app.

The many benefits of going digital

Three important advantages of digital solutions.

When it comes to security systems, your main options are either digital or mechanical solutions. So why choose a digital security system? When compared to mechanical systems, three main benefits set digital solutions apart:

CONTROL

Your digital ENiQ devices store and share all sorts of data, giving you more (real-time) insights in your organisation, as well as giving you a far greater level of control over your security system.

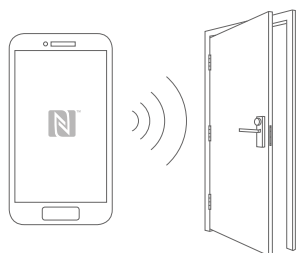

FLEXIBILITY

Making changes in your digital security system does not require a specialist to create new keys or locks: you can easily create as many new transponders as you like or add new devices as your needs change. A lost key also no longer requires you to change locks anymore: simply press a button and your system is secure again.

EASE OF USE

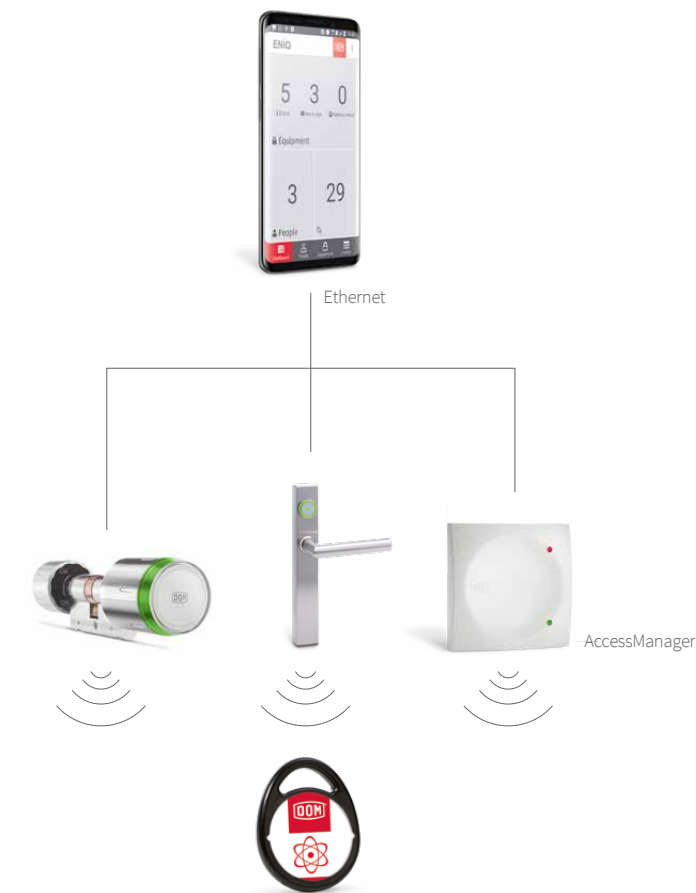

Every solution in your ENiQ system is designed to be as close to 'plug and

play' as possible, with simple installation processes and programming methods. They are also very easy in everyday use. So, no matter how layered your security protocols might be, for users, it can be as simple as only having to hold their transponder against a wall reader.

Programming method ENiQ App

1. Data from transponder will be read via smartphone.
2. Take smartphone to door and program data in the device
3. Person can now open the door.

ENiQ App in a nutshell

1. INSTALLATION

No cables needed for most products.
Plug & Play.

2. SOFTWARE

Easy to install app. Be in full control.
No need for a key safe anymore.

Worrying about your master key system is a thing of the past.

3. MANAGEMENT EXPERIENCE

You are in full control of who has access to what areas, at what time and for what period.

4. USER EXPERIENCE

Users can access anything they need to in your building, but cannot enter rooms they should not be in. This feels safe, without feeling restricted in movement.

A seamless ecosystem of solutions

Create tailor-made security for your situation.

DOM ENiQ offers different ways of managing your security system, which gives you the freedom to create a security experience that best suits your organisation. Whatever way you

choose to manage and organise your system, it will always work seamlessly with your entire ENiQ ecosystem.
