

No matter how you turn it,
keyTec X-tra is the system.

Winkhaus likes to make good things even better. This is also the case with its new keyTec X-tra reversible key system, with which Winkhaus is setting new standards in convenience and design yet again. Suitable for individually-secured cylinders and locking systems, keyTec X-tra impresses thanks to its unique features and high security standard.

keyTec X-tra from Winkhaus – no other key like it.

Reversible keys are always easy to use. However, Winkhaus's X-tra offers extra special convenience: a new tip and a vertical insert position ensure that the key can be inserted even more easily and securely.

Attractive colours for your bunch of keys:

The keyTec X-tra colour diversity.

Which key opens which door? The new key caps in five intensive colours enable you to keep track of everything. Being optically impressive, they improve the key's handiness and the organisation of the locking system. Addition to the system is always possible by simply putting them on the keys.

Engineered in Germany

Winkhaus has been impressing customers with innovative products since 1854. In our development centres in Germany, Winkhaus engineers are delivering outstanding technical developments in the field of window and door technology. Here visions become reality. So you can be certain that each and every of our products is made with outstanding German engineering skill.

keyTec X-tra

The flexible reversible key with
extra convenience

winkhaus.com

„At last, a locking system which focuses on design and convenience!“

Ulrich Meyer, architect

keyTec X-tra has won me over completely:

- + Convenient reversible key
- + For both individual cylinders and locking systems
- + Standard drilling and pulling protection
- + Flexible and future-proof thanks to modular cylinder design

The flexible system which matches your requirements

Modular design for greater flexibility

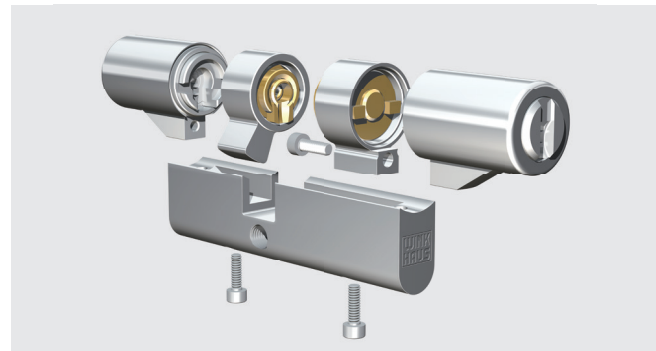

These modular cylinders can be adjusted to different door thicknesses at any time. The advantage: when requirements change – a department is relocated, for instance – keyTec X-tra can be reused in the new location. All cylinders can be adjusted to different lengths and types.

X-tra protection guaranteed

Besides being highly convenient, the keyTec X-tra also makes things difficult for unauthorised users. All X-tra cylinders are equipped with drilling and pulling protection as standard. These protection features make it very difficult to open doors without authorisation.

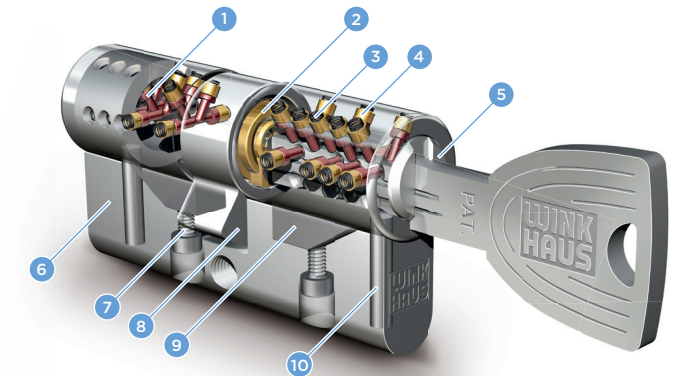

X-tra suitable for all systems, from small to complex.

keyTec X-tra is the ideal system for both individually-secured cylinders and locking systems in all building types, from single family homes through to office buildings with complex locking hierarchies. Keyed-alike cylinders can also be easily provided with a special, exclusive customer profile.

The keyTec X-tra cylinder's modular design ensures it can be adjusted as required to fit different door thicknesses.

A technology that has it all: innovation, convenience, flexibility.
